

3.3 V, One Differential Channel, 2-1 Multiplexer/Demultiplexer Switch for PCI Express® Gen3

CBTL01023GM

Last Updated: Dec 15, 2024

CBTL01023 is a single differential channel, 2-to-1 multiplexer/demultiplexer switch for PCI Express Generation 3 (Gen3), or other high-speed serial interface applications. The CBTL01023 can switch one differential signal to one of two locations. Using a design technique, NXP has minimized the impedance of the switch such that the attenuation observed through the switch is negligible, and also minimized the channel-to-channel crosstalk, as required by the high-speed serial interface. CBTL01023 allows expansion of existing high speed ports for extremely low power.
