# PF51x3 Socket Evaluation Board

## KITPF51SKTEVM NEW

**Preproduction**

このページでは、試作品の情報を掲載しています。ここに記載されている仕様や情報は、予告なく変更されることがあります。追加情報については、 または営業担当者にお問い合わせください。

Last Updated: Mar 27, 2026

The KITPF51SKTEVM enables easy evaluation and development with the PF51x3 power management IC family, targeting low voltage automotive applications up to 5 V. The evaluation module can operate in standalone mode or be controlled through its USB interface. All I²C commands can be managed using NXP's intuitive GUI software.

The socketed board supports one time OTP (One Time Programmable) programming per device. It can also be used in debug mode to test as many configuration settings as needed before final OTP programming.
