MPC564

新規採用非推奨

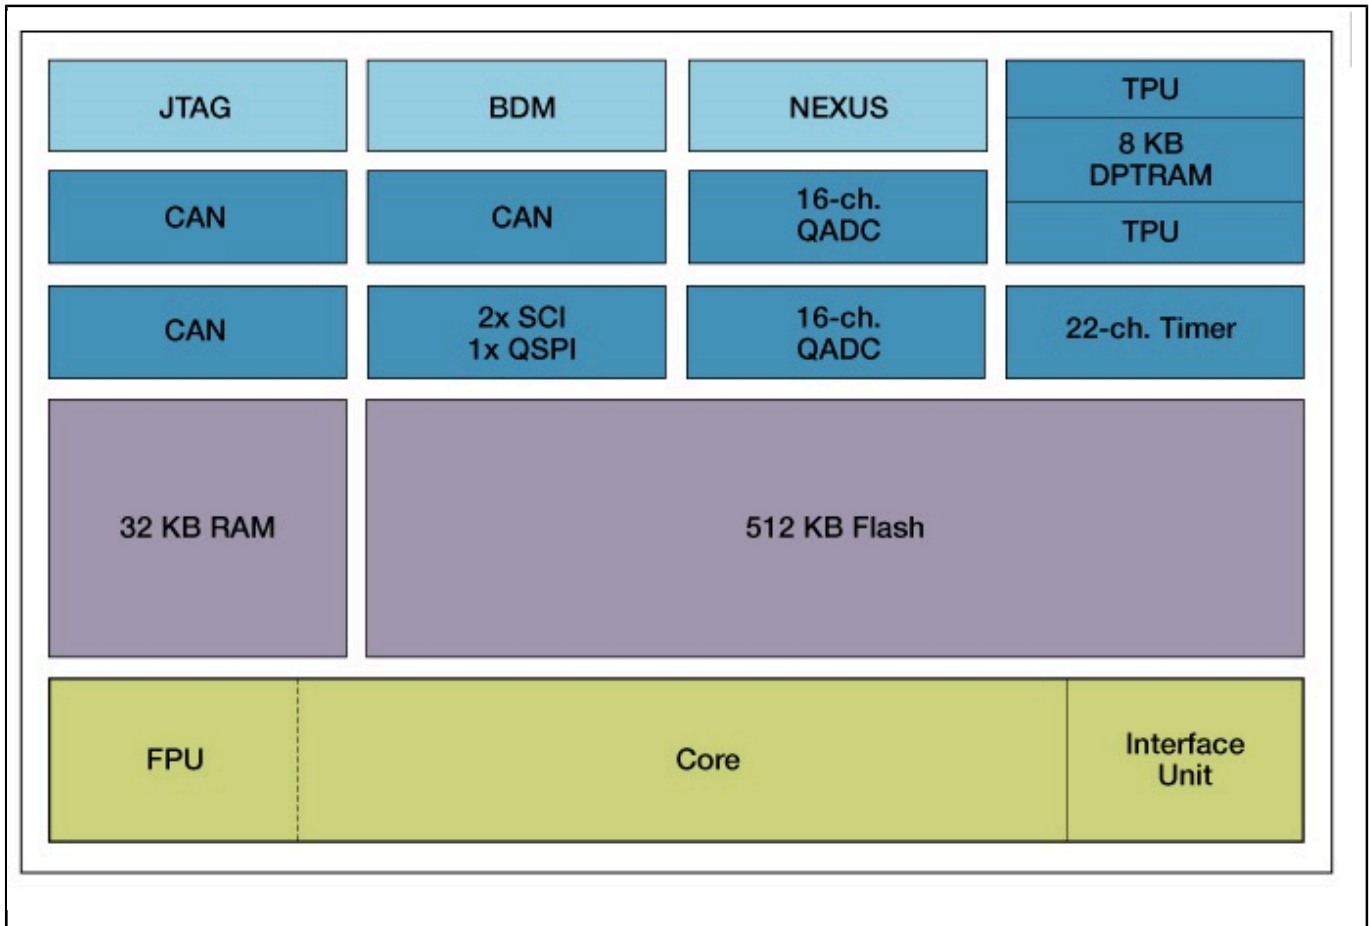

このページでは、新規設計を推奨しない製品に関する情報を掲載しています。

Last Updated: Apr 9, 2022

The MPC564 is a high-speed 32-bit control unit that combines high-performance data manipulation capabilities with powerful peripheral subsystems. This MCU is built up from standard modules that interface through a common intermodule bus (IMB).

The MPC564 is equipped with code compression designed to reduce program size by up to 50 percent, allowing you to store larger programs in the on-board flash memory. Compressed code may also improve performance when using external memories.
