# Network Services Switching Platform

NETWORK-SERVICES-SWITCH

Last Updated: Sep 18, 2023

The NXP® Network Services Switching Platform is an innovative switching and routing platform that addresses the Software-Defined Networking (SDN) and Network Functions Virtualization (NFV) demands of service provider, enterprise and data center networks.

- The platform is a cost and power optimized white box solution that integrates hardware and software, delivering high performance forwarding and extensible network services
- Coupling QorIQ® multicore processors with a standard switch ASSP device, the Network Services Switching Platform provides a flexible and compact solution that adds intelligence and programmable data paths to high performance switching
