

# **12-Channel Power Management Integrated Circuit (PMIC) for High-Performance Consumer Applications**

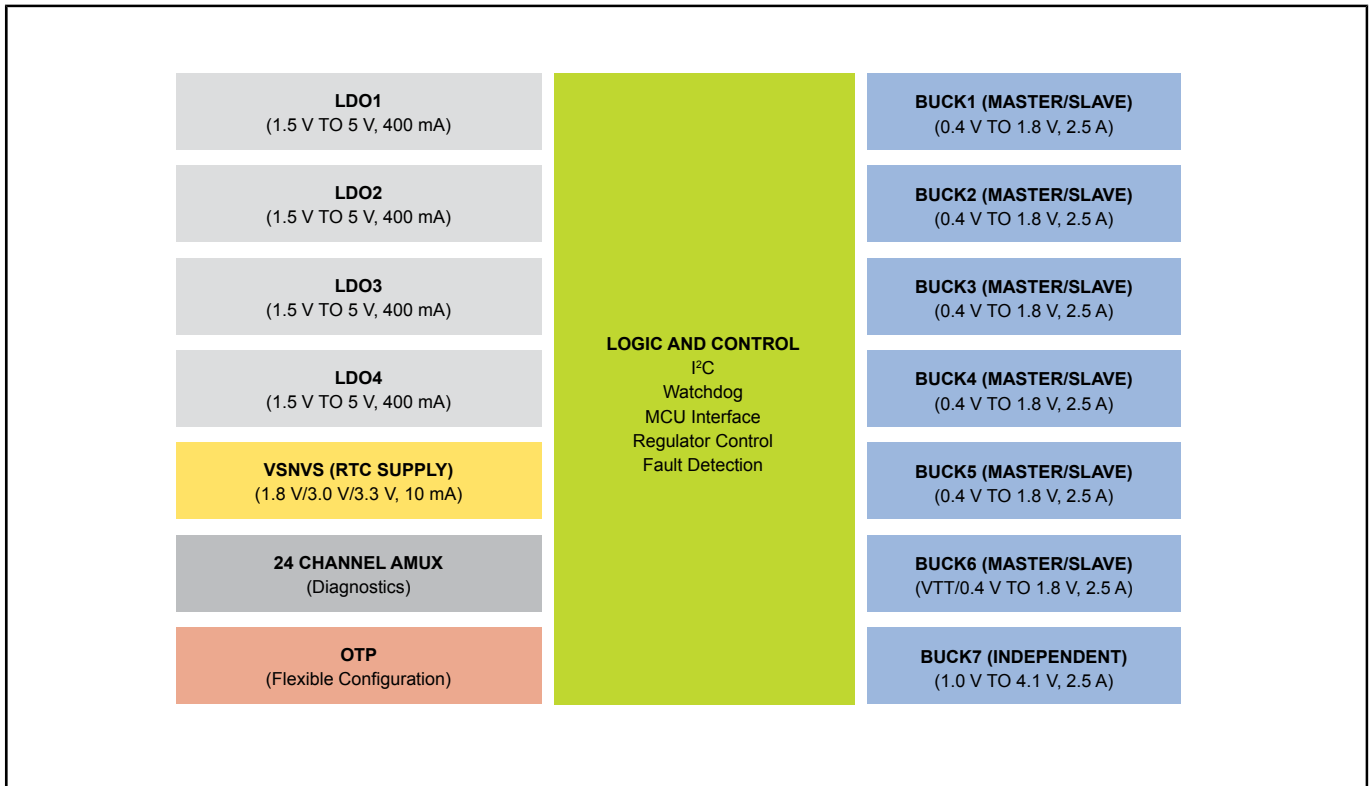

## **PF8121**

Last Updated: Oct 15, 2024

The PF8121 is a power management integrated circuit (PMIC) designed for high-performance consumer applications. This PMIC features seven high-efficiency buck converters and four linear regulators for powering the processor, memory and miscellaneous peripherals.

Built-in one-time programmable memory stores key startup configurations, drastically reducing external components typically used to set output voltage and sequence of external regulators. Regulator parameters are adjustable through high-speed I<sup>2</sup>C after startup offering flexibility for different system states.
