## 1. Introduction

### WARNING

#### Lethal voltage and fire ignition hazard

The non-insulated high voltages that are present when operating this product, constitute a risk of electric shock, personal injury, death and/or ignition of fire.

This product is intended for evaluation purposes only. It shall be operated in a designated test area by personnel qualified according to local requirements and labor laws to work with non-insulated mains voltages and high-voltage circuits. This product shall never be operated unattended.

### 1.1 Scope of this document

In this document, a description is given of the UBA20260 demo boards for 230 V and 120 V mains voltages using the UBA20260 power IC. A description is provided, supported by a set of measurements to show the demo boards characteristics.

The UBA20260 circuit is a half-bridge driver IC setup to drive a typical 23 W burner with a lamp current of about 240 mA. Similar lamp types with a nominal lamp power of 20 W can also be driven. The total power drawn from the mains is about 23 W at a nominal mains voltage of 230 V or 120 V (RMS). The UBA20260 board can easily be configured to drive different Compact Fluorescent Lamps (CFL) of different power ratings. Driving different CFL is possible by changing the inductor tap and installing a different lamp capacitor.

The UBA20260 demo board is not recommended for driving lower voltage linear lighting lamps like the T5 or the T8. For these types of lamps the UBA2014, UBA2021 or UBA2016 are the best options.

The IC is able to drive lamps up to 23 W provided the maximum junction temperature of the IC is not exceeded. There are no THD-requirements for mains powers lower than 25 W so that a pre-conditioner function is obsolete.

**Remark:** Unless otherwise stated all voltages are AC.

The circuit is set up to perform a preheat so the lamp switches on approximately 1 s after the mains voltage is applied to the board. Lamp current boost value is approximately 1.5. For detailed design steps, on the 18 W lamp solution or how to setup lamps with other power ratings see [Ref. 2](#).

The mains voltage operating range is either set for 90 V to 130 V or 200 V to 250 V (RMS) depending on the board ordered.

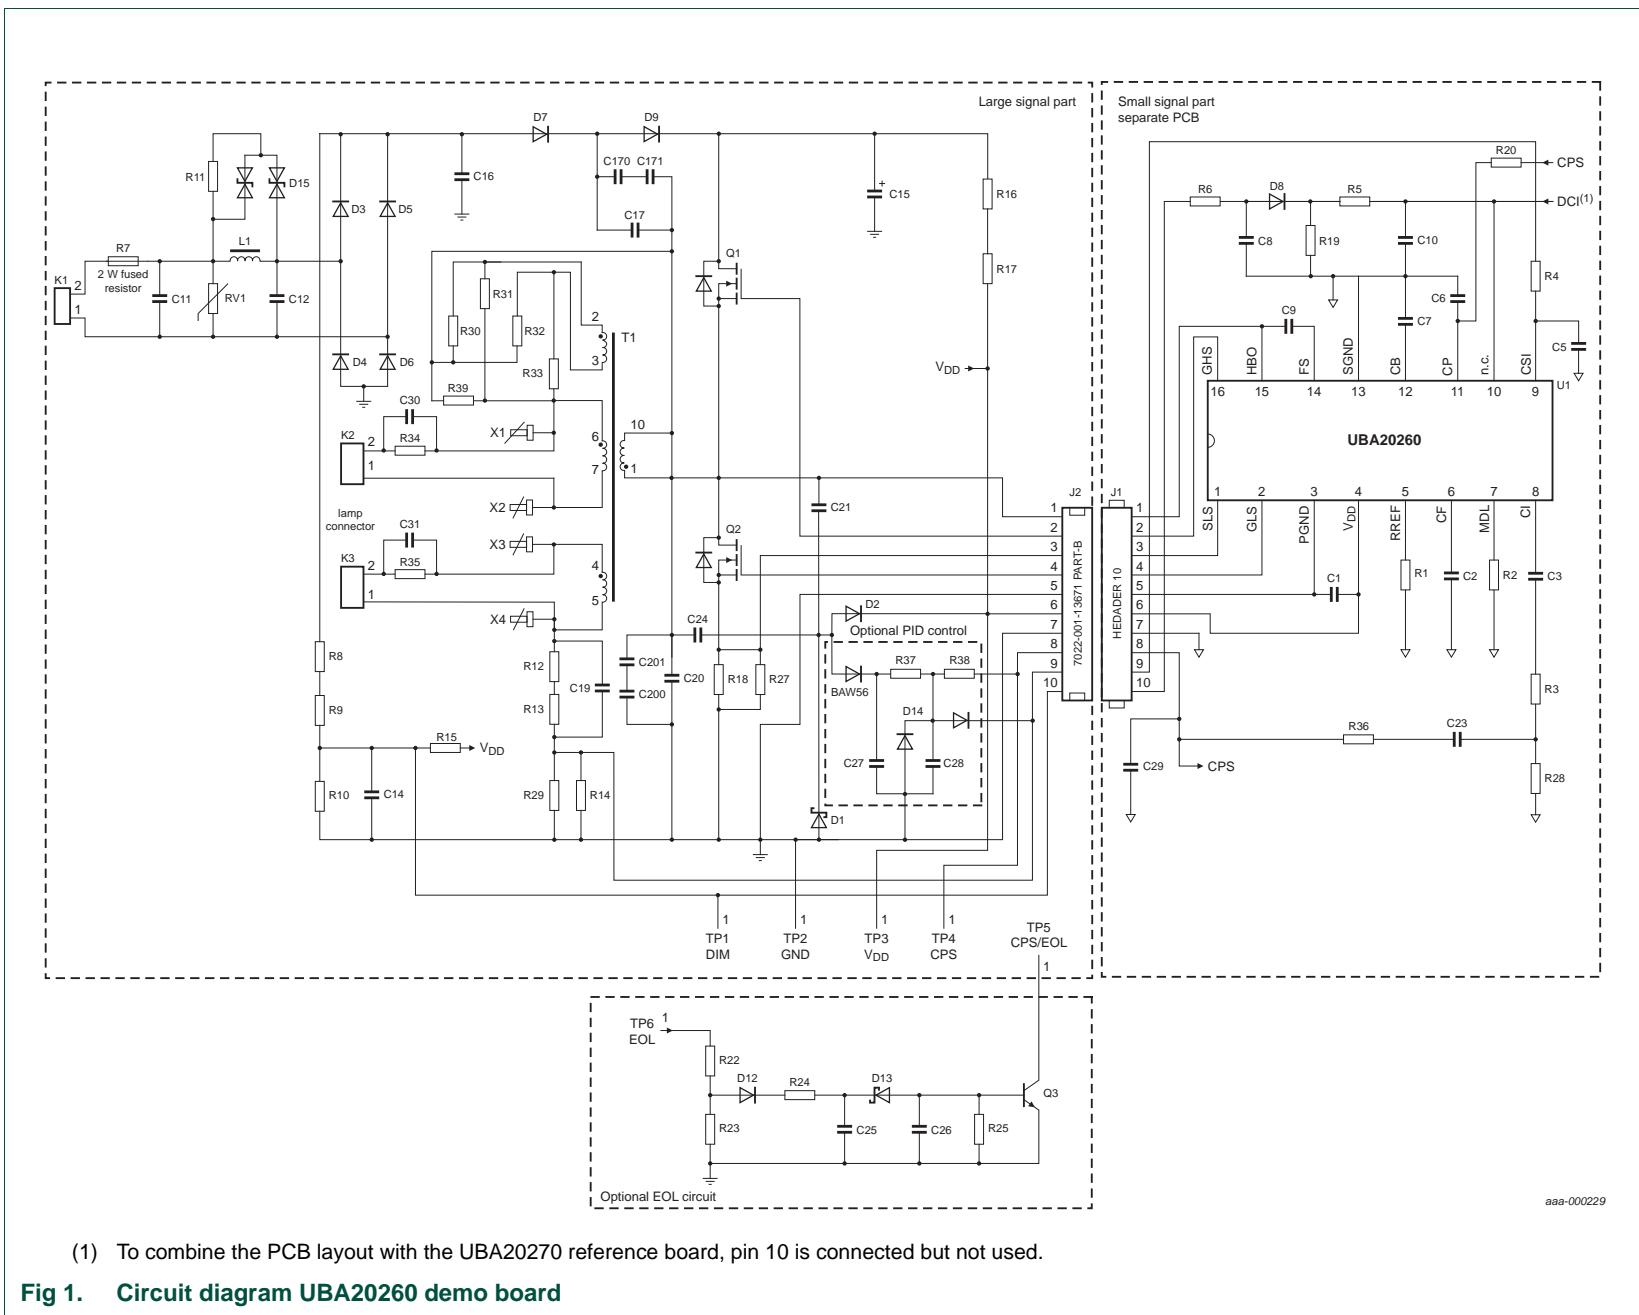

The ICs are intended as cost-effective step-dimmable solutions to drive CFL with an integrated ballast (CFLi). Therefore, the ICs are equipped with a thermal, coil saturation, over-power and OverCurrent Protection (OCP) and a lamp strike failure time-out.

**Remark:** If the UBA20260 is used in a non-integrated ballast or a Matchbox type of ballast, an external lamp detection circuit is required. In addition, the standard circuit must include extra End Of Life (EOL) protection. Additional circuits can be set up to trigger the external power-down on the CP pin.

NXP Semiconductors

230 V and 120 V reference design using UBA20260

## 2. Schematic diagrams

(1) To combine the PCB layout with the UBA20270 reference board, pin 10 is connected but not used.

**Fig 1.** Circuit diagram UBA20260 demo board

### 3. Safety warning

Connect the board to the mains voltage. Do not touch the board while it is connected to the mains voltage. An isolated housing is obligatory when used in uncontrolled, non-laboratory environments. Galvanic isolation of the mains phase using a variable transformer is always recommended.

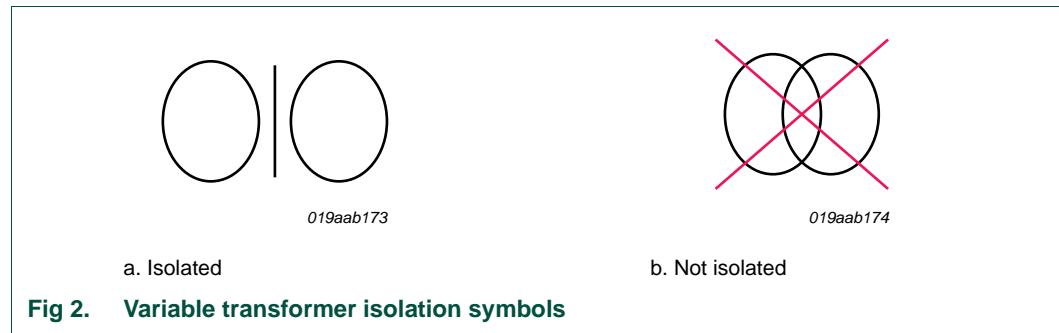

Fig 2. Variable transformer isolation symbols

### 4. Specification

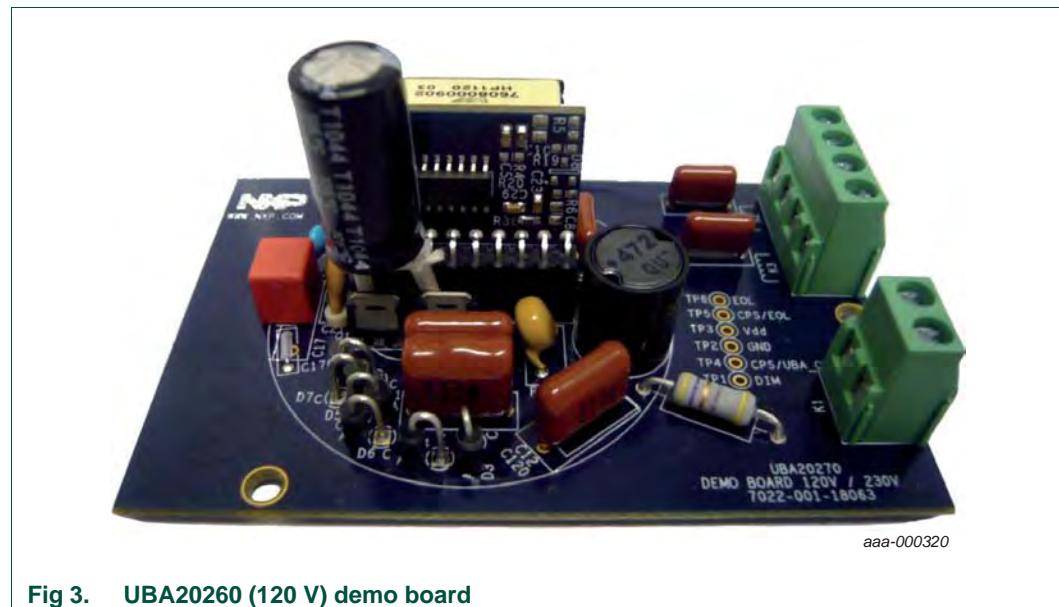

Fig 3. UBA20260 (120 V) demo board

**Fig 4. UBA20260 (230 V) demo board**

The UBA20260 demo board is set up to drive a typical 23 W burner. The specification for each type is as follows:

**230 V:**

- Input voltage range: 230 V; 15 %; 50 Hz
- Input power: 23 W at 230 V
- Input current: 179 mA/228 mA (boost)
- Power factor: > 0.55
- Running frequency 45 kHz; start frequency 111 kHz
- Preheat: 0.7 s
- 1.5 × lamp current boost, set for 50 s

**120 V:**

- Input voltage range: 120 V; 15 %; 60 Hz
- Input power: 23 W at 120 V
- Input current: 328 mA/435 mA (boost)
- Power factor: > 0.55
- Running frequency 45 kHz; start frequency 111 kHz
- Preheat: 0.7 s
- 1.5 × lamp current boost, set for 50 s

**Protective functions:**

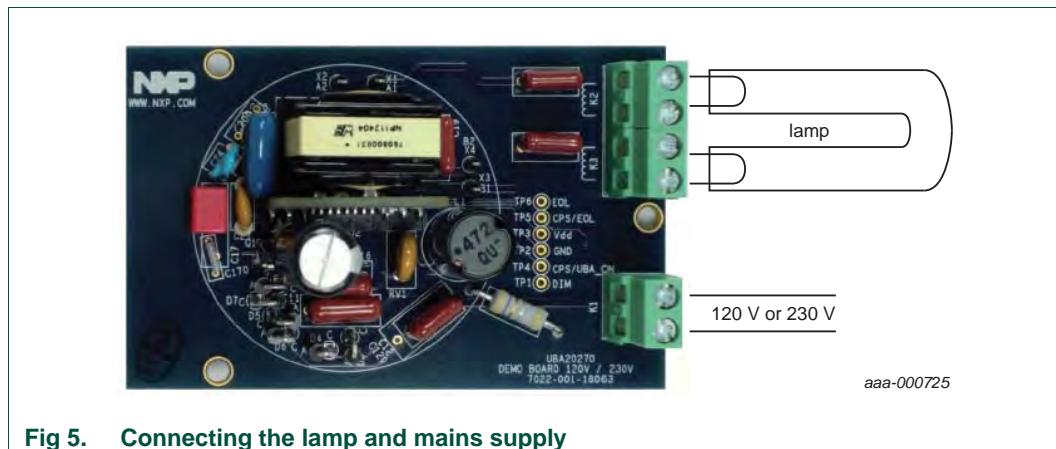

- Coil saturation set at and
  - 230 V: set to 2.3 A
  - 120 V: set to 2.8 A
- OverCurrent Protection (OCP):
  - 230 V: set to 2.3 A
  - 120 V: set to 2.8 A
- Capacitive Mode Protection (CMP)
- OverTemperature Protection (OTP)
- OverPower Protection (OPP)

**Burners:**

- 230 V: typical burner with a lamp voltage of 95 V ( $\pm 10\%$ ) and a lamp current of 160 mA ( $\pm 10\%$ ). Conditions set by resistors R31 and R32
- 120 V: typical burner with a lamp voltage of 110 V ( $\pm 10\%$ ) and a lamp current of 160 mA ( $\pm 10\%$ ). Conditions set by resistors R30 and R33

## 4.1 Board connections

The connection of the lamp and mains supply is shown in [Figure 5](#).

**Fig 5. Connecting the lamp and mains supply**

## 4.2 External 6-pin controller connector

The demo board is equipped with an external control connector intended to control the UBA20260 by a microcontroller or other external control logic. See [Figure 6](#). To be able to control the dimmer input TP1 properly, remove the SMD resistor R8. The connector carries 4 signals, two of which are supply lines, the dimmer input and the short CP pin signal (CPS).

### 4.2.1 TP4 the CSP/UBA\_ON pin

Tp4 the CSP/UBA\_ON is a pin that offers multiple functions. For the 120 V version this pin is used to provide a differential gain path to the UBA20260. It cannot be used as an input or output.

This pin can be used as an external shutdown function when the UBA20260 is in the burn state. To set up for external shutdown, remove the differential gain function, R38, R36 and C29 and install R29.

The CPS pin can be directly short-circuited to ground (TP2 GND) or via an open collector output of a microcontroller. Short circuiting the CP pin to ground sets the UBA20260 in Power-down mode. This state continues as long as the IC is supplied via its  $V_{DD}$  pin, consumption is less than  $220 \mu\text{A}$ . The current from the CPS pin is  $< 50 \text{ mA}$ . To end power-down, power cycle the board or short the TP3 ( $V_{DD}$ ) pin to ground. The current from this pin is  $< 500 \mu\text{A}$  when continuously shorted to ground (TP2). When the  $V_{DD}$  pin is shorted to ground, the  $470 \text{ nF}$   $V_{DD}$  capacitor is discharged. To prevent large discharge currents, install a  $1 \text{ k}\Omega$  resistor in series with the capacitor.

The  $V_{DD}$  pin (TP3) has only a limited supply capability for external logic. Do not load this pin by more than  $2 \text{ mA}$ .

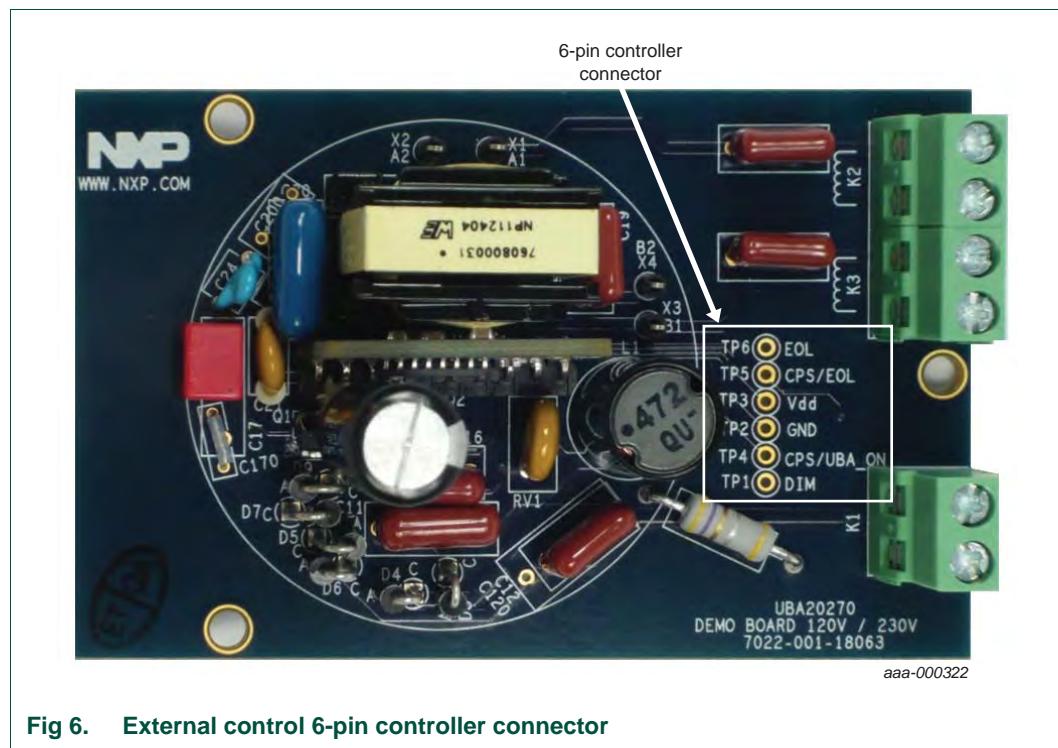

Fig 6. External control 6-pin controller connector

#### 4.2.2 TP5 and TP6 End of life

TP5 CPS\_EOL is the out put of the external EOL circuit on the demo board. Connect this pin to TP4 CSP/UBA\_ON to use the external EOL. Setup TP for external shutdown for this application. See [Section 4.2.1](#).

TP6 is the input of the external EOL circuit. Use the auto transformer winding on T1 in order to use the external EOL. Therefore, remove R30 to R33 and install R39. In addition, hardwire TP6 to T1 pin 2 and hardwire T1 pin 3 to ground.

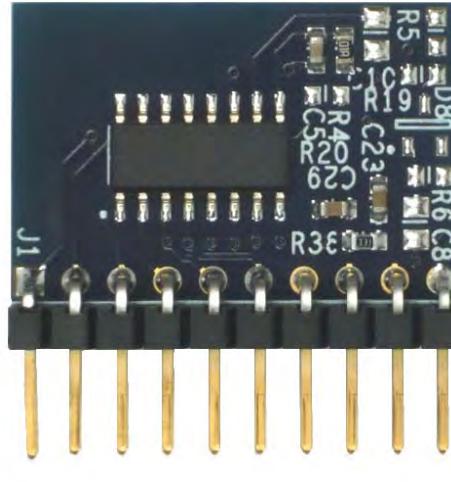

Fig 7. CFL controller board

### 4.3 Using the auto transformer

The inductor supplied with this board accommodates an auto transformer winding. The auto transformer winding lowers or raises the working voltage across the resonant tank capacitor. In addition, it increases the overall efficiency by up to 30 %. Adjust the auto transformer to the lamp voltage to the lamp type connected to the board for correct operation. See [Ref. 2](#).

[Table 1](#) shows how to set the auto transformer. The lamp voltage is the nominal lamp voltage at the rated lamp power when the lamp is not dimmed. The auto transformer is set up as follows for most of the lamps:

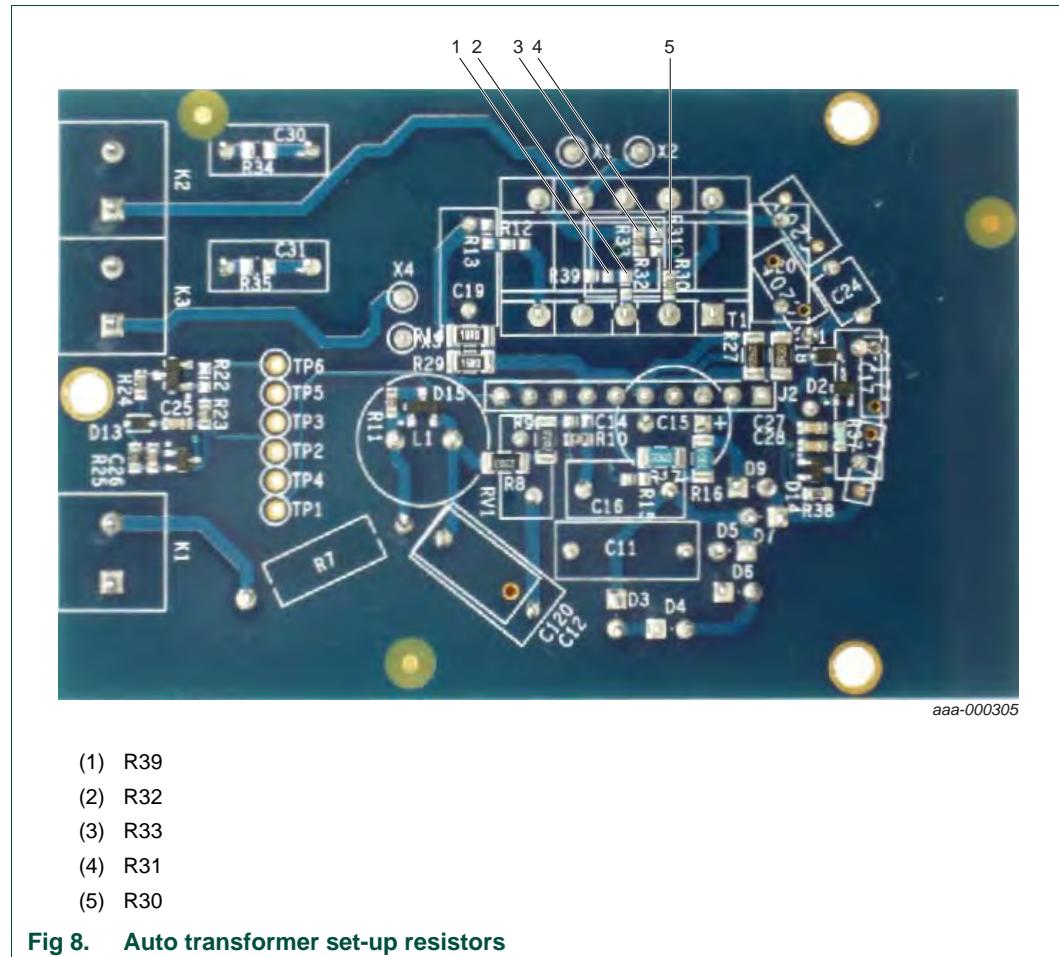

Table 1. Resistor programming

Lamp voltage	Description	Placement R39	Placement R30+R33	Placement R31+R32
$V_{\text{lamp}} < 95 \text{ V}$	Raise voltage across $C_{\text{res}}$ . The voltage source charge pump energy transfer to buffer capacitor is increased			x
$95 \text{ V} < V_{\text{lamp}} < 110 \text{ V}$	No auto transformer. Select upon lamp voltage during deep dimming performance	x		
$V_{\text{lamp}} > 110 \text{ V}$	Lower voltage across $C_{\text{res}}$ . The voltage source charge pump energy transfer to buffer capacitor is decreased		x	

If the lamp voltage is between 95 V and 110 V, the use of an auto transformer is not necessary. However, set-up and use the auto transformer in the following situations:

- where the lamp voltage is too high at low dimming levels
- when the bus voltage exceeds the buffer capacitor voltage rating

**Remark:** Only short-circuit the resistors indicated; otherwise the inductor winding is shorted.

#### 4.4 Bill Of Materials (BOM)

[Table 2](#) provides detailed component information for the common parts for the UBA20260 230 V and 120 V demo boards.

## 5. SO16 package thermal considerations

The UBA20260 in the SO16 package is mounted on a separate board perpendicular onto the main signal PCB. The reason for this is that the IC is not directly subjected to the thermal radiated heat of the lamp. In this way, distance is created between lamp filaments and the IC. The horizontal signal PCB acts as a heat shield for thermal radiated heat.

The PCB is mounted horizontally into a lamp base for most applications. However, the UBA20260 is an SMD component and means the IC is very close to the lamp filaments. The lamp filaments would directly radiate heat onto the IC and limit the IC drive capabilities. Therefore, it is recommended to either mount some form of heat shield between the lamp filaments and the PCB. Alternatively, mount the PCB vertically into the lamp socket to increases the distance between the IC and lamp filaments.

## 7. Inductor specification

Transformer electrical specifications, centered at 25 °C, are as follows:

### DC resistance (at 20 °C):

- 1 to 10, 1.7 Ω, ±10 %
- 2 to 3, 0.8 Ω, ±10 %
- 4 to 5, 0.175 Ω, ±10 %
- 6 to 7, 0.19 Ω, ±10 %

### Dielectric rating:

- 1 kV (AC), 1 minute tested by applying 1.25 kV (AC) for 1 s between pins 1 to 2 (3 + 6, 4 + 7)

### Inductance:

- 1.0 mH ±10 %, 10 kHz, 100 mV (AC), 0 mA (DC), 1 to 10, L<sub>s</sub>
- 2.5 µH ±15 %, 10 kHz, 100 mV (AC), 0 mA (DC), 6 to 7, L<sub>s</sub>
- 2.4 µH ±15 %, 10 kHz, 100 mV (AC), 0 mA (DC), 4 to 5, L<sub>s</sub>
- 44.0 µH ±15 %, 10 kHz, 100 mV (AC), 0 mA (DC), 2 to 3, L<sub>s</sub>

**Saturation current:**

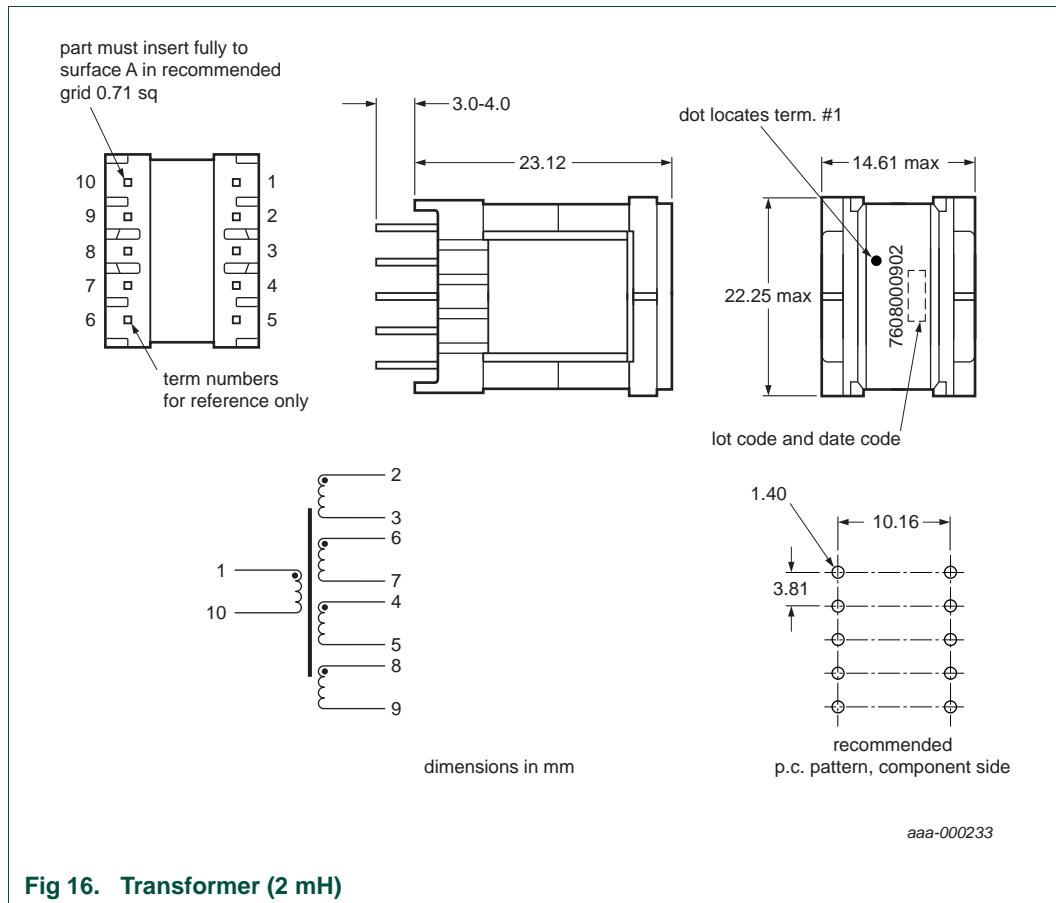

- 2.2 A saturation current causing 20 % roll off from initial inductance.

**Turns ratio:**

- (1 to 10):(6 to 7), (25.93):(1),  $\pm 2\%$
- (1 to 10):(4 to 5), (25.93):(1),  $\pm 2\%$
- (1 to 10):(2 to 3), (7.25):(1),  $\pm 2\%$

**Operating temperature range:**

- $-40^\circ\text{C}$  to  $125^\circ\text{C}$  including temperature rise.

**Fig 16. Transformer (2 mH)**

Transformer electrical specifications centered at 25 °C is as follows:

#### DC resistance (at 20 °C):

- 1 to 10, 4.5 Ω, ±10 %
- 2 to 3, 0.75 Ω, ±10 %
- 4 to 5, 0.180 Ω, ±10 %
- 6 to 7, 0.175 Ω, ±10 %
- 8 to 9, 0.42 Ω, ±10 %

#### Dielectric rating:

- 1 kV (AC), 1 minute tested by applying 1.25 kV (AC) for 1 s between pins 1 to 2 (3 + 4, 5 + 6, 7 + 8)

#### Inductance:

- 2.0 mH ±10 %, 10 kHz, 100 mV (AC), 0 mA (DC), 1 to 10, L<sub>s</sub>

#### Saturation current:

- 1.55 A saturation current causing 20 % roll off from initial inductance.

**Turns ratio:**

- (1 to 10):(2 to 3), (9.74):(1),  $\pm 1\%$
- (1 to 10):(6 to 7), (34.78):(1),  $\pm 1\%$
- (1 to 10):(4 to 5), (34.78):(1),  $\pm 1\%$
- (1 to 10):(8 to 9), (15.21):(1),  $\pm 1\%$

## 8. Abbreviations

Table 5. Abbreviations

Acronym	Description
CFL	Compact Fluorescent Lamp
CFLi	Compact Fluorescent Lamps with an integrated ballast
CMP	Capacitive Mode Protection
EMC	ElectroMagnetic Compatibility
EMI	ElectroMagnetic Interference
EOL	End Of Life
ESD	ElectroStatic Discharge
MOSFET	Metal-Oxide Semiconductor Field-Effect Transistor
OCP	OverCurrent Protection
OPP	OverPower Protection
PCB	Printed-Circuit Board
RMS	Root Mean Square

### 10.2 Disclaimers

**Limited warranty and liability** — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

**Right to make changes** — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

**Suitability for use** — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

**Applications** — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

**Safety of high-voltage evaluation products** — The non-insulated high voltages that are present when operating this product, constitute a risk of electric shock, personal injury, death and/or ignition of fire. This product is intended for evaluation purposes only. It shall be operated in a designated test area by personnel that is qualified according to local requirements and labor laws to work with non-insulated mains voltages and high-voltage circuits.

The product does not comply with IEC 60950 based national or regional safety standards. NXP Semiconductors does not accept any liability for damages incurred due to inappropriate use of this product or related to non-insulated high voltages. Any use of this product is at customer's own risk and liability. The customer shall fully indemnify and hold harmless NXP Semiconductors from any liability, damages and claims resulting from the use of the product.

**Export control** — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

**Evaluation products** — This product is provided on an "as is" and "with all faults" basis for evaluation purposes only. NXP Semiconductors, its affiliates and their suppliers expressly disclaim all warranties, whether express, implied or statutory, including but not limited to the implied warranties of non-infringement, merchantability and fitness for a particular purpose. The entire risk as to the quality, or arising out of the use or performance, of this product remains with customer.

In no event shall NXP Semiconductors, its affiliates or their suppliers be liable to customer for any special, indirect, consequential, punitive or incidental damages (including without limitation damages for loss of business, business interruption, loss of use, loss of data or information, and the like) arising out of the use of or inability to use the product, whether or not based on tort (including negligence), strict liability, breach of contract, breach of warranty or any other theory, even if advised of the possibility of such damages.

Notwithstanding any damages that customer might incur for any reason whatsoever (including without limitation, all damages referenced above and all direct or general damages), the entire liability of NXP Semiconductors, its affiliates and their suppliers and customer's exclusive remedy for all of the foregoing shall be limited to actual damages incurred by customer based on reasonable reliance up to the greater of the amount actually paid by customer for the product or five dollars (US\$5.00). The foregoing limitations, exclusions and disclaimers shall apply to the maximum extent permitted by applicable law, even if any remedy fails of its essential purpose.
